

FUNNEL HEAD SCREWS

For Tight, Clean & Fast Cabinet Assembly

Built for Tight, Clean Joints

Meet the **Quickscrews Funnel Head Screw** — a next-generation fastener designed for stronger cabinet assembly without splitting, chipping, or gaps. Its stepped, washer-style head and precision threads make it the perfect upgrade from standard construction screws.

Perfect For

- **Cabinet box assembly** for shops without CNC Machines
- **MDF, melamine,** and **plywood** builds
- **Joining dissimilar woods** like melamine to wood

Why It's a Game Changer

One screw replaces many. Designed to pull joints tight, stop flush, and deliver cleaner results—without splitting or surface damage.

Specs

Square Drive, Funnel Head with Serrations, T17 Spiral Point, Coarse Thread

Key Features

Stops Flush—No

Chipping: The stepped, washer-style funnel head seats cleanly into the surface without puffing or chipping material.

Reliable Hold: Precision threads drive smoothly with consistent grip for reliable hold.

No Pre-Drilling: Type 17 Point cuts cleanly through hardwood, MDF, or melamine without the need for pilot holes.

Saw Teeth under head and shoulder cut perfectly clean hole in Melamine every single time.

Spiral Thread under head assists with joining dissimilar materials. Crushes sawdust so it doesn't go anywhere.

Tight Joints: Pulls parts together for tight, clean joints with a smooth, professional finish. Closes even the smallest 1/8-inch gaps.

Anti-Splitting Spiral Tip: Type 17 Spiral Tip clears sawdust as you drive, preventing wood splits near edges of material.

Built for Speed: Drive directly—no glue, clamps, or filler needed.
