

Essential Fastening Accessories

Choosing the right screw is only part of the job. The right accessory helps you install **faster, cleaner, and with fewer headaches**—especially in cabinet, furniture, and assembly applications.

Below are common fastening challenges and the Quickscrews accessories designed to solve them.

Tired of Screws Falling Off Drive Bits?

PROBLEM:

Smaller cabinet and assembly screws can tip, fall, or drop before engagement—slowing you down and breaking your rhythm.

Shows up most when working with:

- Smaller screws like **#6 diameter and under Cabinet Assembly and Hardware Screws**

SOLUTION:

■ Magnetic Drive Bits

- Help hold screws in place during starts
- Improve control with smaller fasteners
- SKUs Starting with 126 = Magnetic Drive Bits
- SKUs Ending in V5 = Impact Drive Bits

■ Magnetic Bit Holders (2-3/8" - 10" Lengths)

- Extend reach without sacrificing control
- Maintain magnetic retention during placement
- Compatible with standard insert bits and drill chucks

■ Ultra Magnetic Bit Holder (SKU 14203P)

- High-powered magnet holds screws so they won't fall off while driving. Excellent for Installing Cabinets.
- Quick Release feature locks bits in place

Driving Screws Overhead During Cabinet Installation?

PROBLEM:

Overhead or vertical installs make it harder to balance screws before engagement, increasing dropped fasteners and rework.

This shows up most during:

- Upper cabinet installation
- Vertical or overhead assembly

SOLUTION:

■ SQ2 X 1" Square Drive Bit

(SKU **11778P** or **11778V5** - impact rated)

■ Ultra Magnetic Bit Holder (SKU 14203P)

Together, these help:

- Keep screws attached to the bit before driving
- Choose square drive screws and bit for maximum control with fully engaged bits and zero wobble
- Reduce hand starts when working above shoulder height

Working with Many Fastener Types for Maintenance & Repair?

PROBLEM:

Maintenance and repair work rarely involves just one screw or fastener. HVAC systems, appliances, and facility repairs often require switching between multiple screw types, sizes, and nuts—sometimes within the same panel or unit.

Common for:

- Appliance service & repair (HVAC, fridges, washers, dryers)
- Building & hospital maintenance

SOLUTION:

- **Magnetic Nut Setters (SKU 12314P)**
 - Designed to drive standard hex screws and bolts
 - Magnetic hold improves control and speed during repetitive fastening
- **62-Piece Insert Bit Kit (SKU 15765)**
 - Covers Phillips, Square, Torx, Hex, and more in one kit
 - Makes drive swapping easy
- **Drive Bit Magnetizer / Demagnetizer (SKU 15767)**
 - Adds magnetism to steel bits as needed

Driving Hex-Head Screws or Bolts?

PROBLEM:

Standard bits aren't designed to securely hold hex-head fasteners, especially during repetitive assembly.

SOLUTION:

- **Magnetic Nut Setters (1 3/4" - 6" Lengths)**
 - Designed to drive standard hex screws and bolts
 - Magnetic retention improves control during starts for speed and consistency on every install.

Other Accessories to Consider:

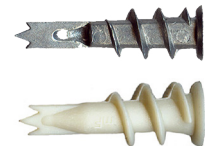

■ Hanger Bolt Drivers

- Make installing hanger bolts faster and more controlled in furniture, fixtures, and light construction applications.

■ Double-Ended Drive Bits (SKU 11790, 11791)

- Flip these bits around and get twice the life

■ Wall Anchors

(SKU 1436, 1934)

- Provide secure fastening when mounting into drywall where screws alone won't hold.

Why Accessories Matter as Much as the Screw

Accessories aren't an afterthought—they're part of the fastening system. The right accessories help you:

Work faster | Drop fewer screws | Improve alignment | Get consistent results

Complete fastening solutions.
Screws and accessories that work together.
